

HIV /Syphilis Synergy is LETHAL

**Impaired clearance of syphilis
Intensified stage progression
Treatment complications**

Increased risk of HIV acquisition

Make Syphilis detection with HIV a HABIT

FACTS

- ▶ HIV and syphilis are sexually transmitted diseases that share common risk factors.
- ▶ The presence of syphilis infection increases the chances of transmission of HIV.
- ▶ Syphilis is treatable and curable, However, having HIV can make syphilis harder to treat.
- ▶ HIV/Syphilis co-infection is lethal and leads to more profound neurocognitive impairment.
- ▶ HIV/Syphilis co-infected individuals have poorer immune recovery during ART.
- ▶ Eliminating HIV effectively requires the timely detection of syphilis as well.

According to CDC : One should get tested regularly for syphilis if,

- Having HIV
- Have partner(s) who have tested positive for syphilis
- Have certain risk factors for syphilis in pregnant women

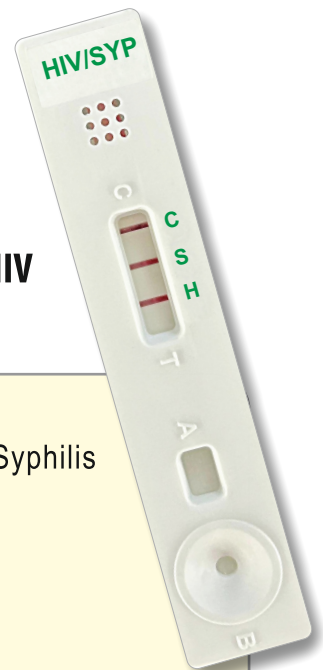

Add value to your

HIV testing with

DUOSCREEN

HIV/SYP

Complementary detection of Syphilis with HIV

✓ **Double Antigen Sandwich Assay**

- Detects and differentiates total antibodies against HIV and Syphilis
- Detects individual and co-infections of HIV and Syphilis

✓ **Sensitivity and Specificity compliant with ELISA / CLIA**

Analyte	Sensitivity	Specificity
HIV	100%	100%
SYPHILIS	100%	100%

✓ **Utilizes serum, plasma or Whole blood as specimen**

- Convenient to use in various health care settings

✓ **Detects HIV and Syphilis in single device**

- Facilitates procedural and labelling accuracy
- Increased user safety by reducing hazardous sample handling and waste

✓ **Storage at 4°C to 30°C**

- Suitable for laboratory, field or surveillance testing
- Ideal for resource-limited settings

The Habit of Detecting Syphilis with HIV
