FIAcheck™

FSH

Fluorescence Immunoassay for Quantitative determination of FSH (Follicle Stimulating Hormone) in Human Serum

DEVICE

FOR IN VITRO DIAGNOSTIC USE ONLY

Store at 4°C to 30°C

INTENDED USE

FIAcheck™ FSH Fluorescence Immunoassay is intended for the in-vitro quantitative measurement of FSH (Follicle stimulating hormone) in human serum.

INTRODUCTION

Follicle-Stimulating Hormone (FSH) and Luteinizing Hormone (LH) are intimately involved in the control of the growth and reproductive activities of the gonadal tissues, which synthesize and secrete male and female sex hormones. The levels of circulating FSH and LH are controlled by these sex hormones through a negative feedback relationship. FSH is a glycoprotein secreted by the basophilic cells of the anterior pituitary. Gonadotropin-release hormone (GnRH), produced in the hypothalamus, controls the release of FSH from anterior pituitary. Like other glycoproteins, such as LH, TSH and HCG, FSH consists of subunits designated as alpha and beta. Hormones of this type have alpha subunits that are very similar structurally; therefore the biological and immunological properties of each are dependent on the unique beta subunit. In the female, FSH stimulates the growth and maturation of ovarian follicles by acting directly on the receptors located on the grannulosa cells; follicular steroidogenesis is promoted and LH production is stimulated. The growth of the seminiferous tubules and maintenance of spermatogenesis in men are regulated by FSH. Tumors of the testes generally depress serum FSH concentrations. High levels of FSH in men may be found in primary testicular failure and Klinefelter syndrome. Elevated concentrations are also present in cases of starvation, renal failure, hyperthyroidism and cirrhosis.

PRINCIPLE OF THE TEST

FIAcheck™ FSH is based on principle of agglutination of antibodies/anti-sera with respective antigen in immuno-chromatographic format using fluorophores as signal generators. The **FIAcheck™ FSH** test device is coated with immobilized FSH mouse monoclonal antibody 1 on the test line, goat anti chicken IgY in control line and a mixture of FSH mouse monoclonal antibody 2 and Chicken IgY labeled with fluorescent microspheres on the binding pad.

FSH in sample binds to the FSH mouse monoclonal antibody 2 labeled with fluorescent microspheres in the binding pad.

The fluorescent labeled Ag-Ab complex moves forward due to capillary action and is captured by the immobilized FSH mouse monoclonal antibody 1 forming a double antibody sandwich and produces the test line. Chicken IgY labelled with fluorescent microspheres binds with goat anti chicken IgY to produce the control line. When the **FIAcheck™** test device is inserted in the **FIAcheck™** analyzer, it scans both the test line and control line. The ratio of the two fluorescence values is used to calculate the concentration of the analyte present in the sample.

MATERIALS AND COMPONENTS

Materials provided with the test kits:

- **FIAcheck™ FSH** test device in a sealed pouch with desiccant.
- QR Code card for calibration.

Materials required but not provided

- Precision pipettes: 100µl
- Disposable pipette tips
- Disposable Gloves
- **FIAcheck™** Analyzer (Time Resolved Fluorescence Immunoassay Analyzer)
- Digital Thermometer
- Stopwatch

STORAGE AND STABILITY

1. **FIAcheck™ FSH** kit is stable at 4°C to 30°C upto expiry date printed on the label. DO NOT FREEZE
2. **FIAcheck™** Test device should be used within 30 minutes once the foil pouch is opened.
3. If the colour of the desiccant has changed from blue to pink or colourless at the time of opening the pouch, kindly discard the device and use another device.

SAMPLE COLLECTION

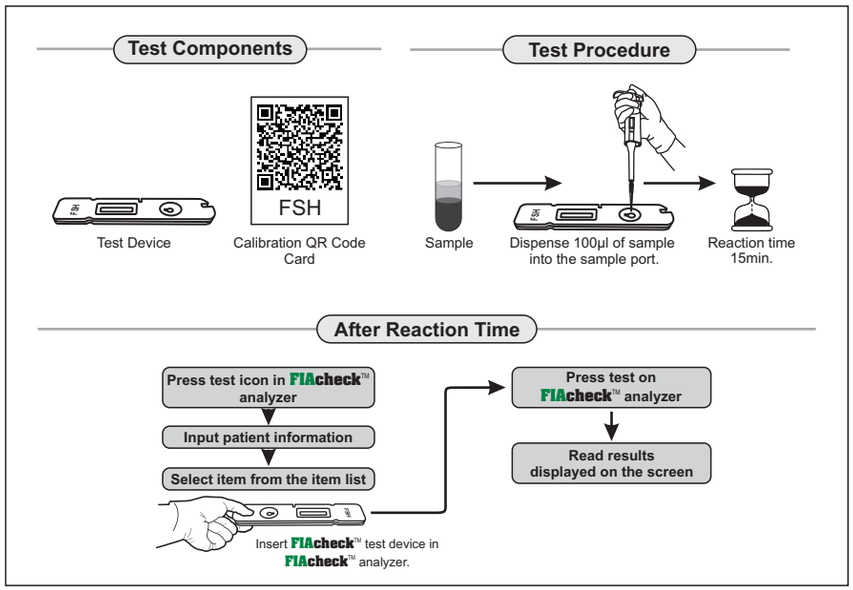
1. Only Human Serum sample should be used. Other bodily fluids and samples may not give accurate result.
2. The test should be performed within 4 hours after the sample collection at room temperature.
3. Avoid grossly hemolytic, lipemic or turbid samples.
4. Preferably use fresh samples. However, samples can be stored for 3 days at 2°C to 8°C, and if more than 3 days, they should be stored at -20°C.
5. The sample should be recovered to room temperature (18°C to 30°C) before testing. Avoid repeated freezing and thawing of samples as it can affect test values.
6. Samples containing precipitate or particulate matter should be clarified by centrifugation prior to use.
7. Samples should be free from particulate matter and microbial contamination.

PRECAUTIONS

1. Only for In vitro diagnostic use.
2. After the test device is removed from the sealed pouch, it should be used immediately or within 30 minutes of opening the pouch.
3. Do not reuse the tested **FIAcheck**™ device.
4. Do not use damaged **FIAcheck**™ test device or pouch.
5. All samples should be considered potentially infectious and discarded appropriately as per Standard Bio-Safety guidelines.
6. Do not use kit after the expiry date.
7. Do not mix components of one kit with another.
8. Always use new tip for each sample.
9. Scan QR code card specific to the lot you are using.
10. Ambient temperature of testing environment directly impacts the accuracy of results. Ideal working temperature is 18°C to 30°C.
11. The **FIAcheck**™ test device should be read immediately after the specified reaction time. Delay in reading might affect the accuracy of results.
12. The **FIAcheck**™ test device should be used only in conjunction with **FIAcheck**™ analyzer for accurate and reliable results.

TEST PROCEDURE

1. To calibrate the **FIAcheck**™ **FSH** kit, scan the QR code card provided with the kit.
2. Remove **FIAcheck**™ **FSH** test device from sealed pouch and place it horizontally on a clean table, label the device with sample identity.
3. Dispense **100 µl** of sample onto the sample port in the **FIAcheck**™ **FSH** test device.
4. Incubate at room temperature (18°C to 30°C) for **15 minutes**.
5. After 15 minutes, insert the test device immediately into the **FIAcheck**™ analyzer and read results.



Expected Range

The following reference interval was obtained after statistical analysis of the confidence interval for the tests of the content of FSH in serum samples of healthy people:

Gender	Stage	Range (mIU/mL)
Mature male	-	1.25-13.50
Mature female	Follicular phase	2.45-15.55
	Ovulation	5.35-24.80
	Luteal phase	1.65-10.25
	Menopause	24.60-135.75

It is recommended that each laboratory establish its own reference range for the population it serves.

PERFORMANCE CHARACTERISTICS

1. Measuring Range: 1-200mIU/mL.
2. Lower Detection Limit: ≤0.6mIU/mL.
3. Upper Detection Limit: ≥200mIU/mL.
4. Accuracy: Based on comparison experiments, the relative standard deviation of ≤15%, the correlation coefficient of r≥0.990 was observed.
5. Within-Run Precision: ≤15%.
6. Between-Run Precision: ≤15%.
7. Hook Test: No hook effect with high concentration sample. Hook test was conducted with reference material exceeding the upper limit of measuring range, and the detection result was greater than the upper limit of detection.
8. In an internal Study, **FIAcheck**™ **FSH** was evaluated against commercially available licensed kit with 100 random clinical samples and **FIAcheck**™ **FSH** has demonstrated 100% clinical correlation with the commercially available licensed kit.

FSH Levels	No. of samples	FIAcheck™ FSH	EIA FSH
Normal	80	80	80
Low	8	8	8
High	12	12	12

9. In an external Study, **FIAcheck**™ **FSH** has been evaluated by a NABL accredited lab against their reference method. In this evaluation **FIAcheck**™ **FSH** has demonstrated 100% correlation with the reference method.
   *Data file: Zephyr Biomedicals (A Division of Tulip Diagnostics (P) Ltd).

LIMITATIONS OF THE ASSAY

1. As with all diagnostic tests, a definite clinical diagnosis should not be based on the results of a single test, but should only be made by the physician after all clinical and laboratory findings have been evaluated.
2. This kit is only for human serum.

WARRANTY

This product is designed to perform as described on the label and package insert. The manufacturer disclaims any implied warranty of use and sale for any other purpose. In the event of performance changes or product malfunction, please contact manufacturer.
