

## Cancheck®-AFP Rapid test for the detection of AFP in human serum / plasma / whole blood

Intended Use:			
IIIICIIUCU USC.			

Cancheck®-AFP, a rapid, qualitative, two site sandwich immunoassay for the detection of Alpha Feto Protein (AFP) levels in human serum/plasma/whole blood.

## Cancheck<sup>®</sup>-AFP kit components:

Device	Membrane test assembly pre-dispensed with monoclonal Anti-AFP colloidal gold conjugate, rabbit IgG colloidal gold conjugate, monoclonal Anti-AFP antibody and Anti-rabbit antibodies coated at the respective regions	
Buffer	Ready to use buffer in a dropper bottle	
Dropper	Disposable plastic sample dropper	
Other Accessories	Desiccant pouch and Package Insert	

## **Performance Characteristics:**

Sensitivity: 100% Specificity: 99.45%

FEATURES	BENEFITS	
Excellent Accuracy	Can detect ≥ 25 ng/ml of AFP in the sample	
Specific Monoclonal Antibody directed against AFP	No cross-reactivity with homologous molecules	
Convenient, rapid, 2-step procedure, storage at 4-30°C	No skilled personnel, refrigeration or instrument required	
Flexible and usability in all settings	Serum / plasma / whole blood can be used as specimen	
Non - Invasive, 15 minutes assay	High patient compliance	

Storage / Stability	Temperature	Duration	
Unopened kit	4-30°C	24 Months	
Opened kit	4-30°C	<1 Hour	

Available Pack Sizes		
10 Tests
