

	Rapid Test for Troponin I in human whole blood (Device)
Application	Rapid, two-site sandwich immunoassay for the detection of human cardiac Troponin I (cTnI) level in human whole blood.
Principle	Rapid, qualitative, two site sandwich immunoassay, lateral flow device
Detection limit	≥ 0.3 ng/ml of Cardiac Troponin I.
Sensitivity	100%
Specificity	100%
Reagents	Membrane assembly predispensed with <ul style="list-style-type: none"> • Agglutinating sera for cTnI-colloidal gold conjugate <ul style="list-style-type: none"> - colloidal gold conjugate, rabbit IgG colloidal gold conjugate • Agglutinating sera for cTn at 'Test' region • Agglutinating sera for rabbit globulin at 'Control' Region (C)
Test duration	20 mins.
Storage / Stability	4-30°C, 24 months

Presentation	Pack	Cat.No.
AMICHECK- TROP I kit contains individually pouched device with sample dropper	10 Tests	506010010
