

	Rapid Test for Malaria (Pan)
Application	For the detection of pan specific pLDH, utilizing whole blood samples. parabank is especially designed to exclude infected blood from the blood supply in the blood bags to prevent transfusion acquired malaria
Principle	Self performing, rapid qualitative immunoassay, lateral flow dipstick
Sensitivity	100% in correlation with microscopy
Specificity	100% specific to pan specific pLDH
Reagents	<ul style="list-style-type: none"> • Membrane assembly predisposed with <ul style="list-style-type: none"> - Agglutinating sera for Pan specific pLDH - colloidal gold conjugate, rabbit IgG colloidal gold conjugate - Agglutinating sera for Pan specific pLDH at 'Test' region - Agglutinating sera for rabbit globulin at 'Control' region • Clearing Buffer
Test duration	Twenty minutes assay
Storage / Stability	4-30°C, 2 years

Presentation	Pack	Cat.No.
PARABANK kit contains individually pouched dipstick, clearing buffer and 5 µl sample loop	10 Tests	50302010
	25 Tests	503050025
